# THE IDEAL MODULE FOR LAMINATING AND PROTECTING CARDS

When combined with a CLM (Card Lamination Module), the Evolis Avansia printer becomes an all-in-one printing, encoding, and laminating system for any plastic card that needs to be secured and/or protected. ID cards made with the CLM can be used for up to 10 years and are highly tamper-resistant.

### EASY TO USE

- Simply connect a CLM for Avansia to an Avansia printer to create an all-in-one system. Without replacing your printer, you can easily equip it with a lamination station.
- Film installation is straight-forward and all laminates are automatically recognized by Avansia.

#### ASSURED PRODUCTIVITY

- In a single operation, an Avansia printer equipped with a CLM can encode various cards (magnetic stripe, contact or contactless smart cards), print them using retransfer technology, and laminate them in one pass.
- Out of the box, the CLM module for Avansia can laminate dual-sided cards.
- The printing and lamination modules work in parallel, producing up to 133 printed and laminated single-sided cards per hour or 79 printed and laminated dual-sided cards.

### WIDE SELECTION OF LAMINATES

- Evolis offers a wide range of patches and varnishes, with or without holograms.
- Upon request, our team can develop custom laminates for special projects or specific applications.
- All our patches and varnishes are available in large quantity formats, allowing for maximum system uptime.
