IDENTIV

Thursby PKard® Readers for Android™

Ready to Go. Whenever. Wherever.

Sleek, secure Thursby PKard Readers for Android take mobility to the next level, providing high security while supporting BYOD and GFE.

PKard Reader Overview

Identiv's Thursby PKard Reader is bundled with Sub Rosa® software to sign/encrypt/decrypt email via OWA while also accessing calendars and two-factor websites with Department of Defense (DoD)-issued Common Access Cards (CAC), federally issued Personal Identification Verification (PIV) cards, and commercially issued PIV-I cards. Every reader comes with a six-month warranty and access to U.S.-based phone and email support.

PKard Plug-In Readers

Thursby collapsible plug-in smart card readers are compact, flexible readers bundled with software and support. The readers are available as micro-USB or USB-C and are therefore agnostic across the Android platform, respectively.

PKard Reader Cases

Thursby reader cases are elegant, discrete, and currently available for the Samsung Galaxy S7/S9 model phones. The cases with built-in PKard Readers are bundled with software and support for the most secure mobile CAC and PIV card enablement. Cases feature an easy on/off one-piece design, easy pass through charging via the built-in micro USB port, and allow smart cards to securely slide into the back of the case.

Sub Rosa Secure Mobile Browser

Thursby's Sub Rosa suite of products provides the ability to access two-factor websites, sign, encrypt, and decrypt emails, and view, create, and respond to calendar events. For an additional charge, edit and sign PDFs.

High Security

- Provides secure access for BYOD (bring your own device) and GFE (government furnished equipment) deployments
- FIPS 140-2 certified

Multi-Card Support

- Department of Defense-issued CAC
- Federally issued PIV
- Commercially issued PIV-I

Bundled with Sub Rosa

- Full access to OWA calendar
- Enables smart cards to access, sign, encrypt, and decrypt email via OWA
- Provides two-factor authentication for secure websites

Support Included

- Phone, email, forum, or chat

Optional PDF Signing

- Edit and sign PDF documents on-the-go

On November 1, 2018, Identiv announced the acquisition of **Thursby Software Systems, Inc.**, an Arlington, Texas-based provider of security software. Thursby's software solutions support BYOD (bring your own device), GFE (government furnished equipment), and two-factor authentication while providing strong security for U.S. federal government, armed forces, enterprise, and personal mobility.
